

**Table 3.** The median  $\log_{10} \tau_k$  for  $k = \text{HI}, \text{OVI}, \text{NV}, \text{CIV}, \text{CIII}$  and  $\text{SiIV}$ , as a function of impact parameter (rows) and distance along the LOS (columns), used to construct Figure 4. The values from the innermost transverse and LOS distance bins are plotted in Figure 5. We note that  $\log_{10} \tau_{\text{SiIV}} = -6.00$  are flag values which indicate that the median optical depth in that bin is negative.

| HI         |                         |                         |                         |                         |                         |                         |                         |                         |                         |
